# Falls Prevention Service

Monitoring patients at risk of falls – for patients at home  
or in a care home

**inhealthcare**

## How does the service work?

Our falls prevention service highlights patients at most risk of a fall.

Patients are sent a series of questions around how they are feeling, if they have experienced any dizziness, if they have had any falls and how they are doing with their exercise plans.

Patients can choose to relay the information using a communication channel of choice.

These include SMS, the My Inhealthcare app, an automated telephone call or online.

The service is simple to use and works for patients of all technical abilities as well as those without the internet or access to a smartphone.

## What are the benefits of the service?

- Highlights patients at most risk of a fall
- Full automated service, removing administration for clinical staff
- Simple to use for patients of all ages and technical abilities
- Patient readings integrate into leading GP systems
